South Australia Access: Lodgement of EPEPR

The Company has compiled and lodged an Exploration Program for Environment Protection and Rehabilitation ("EPEPR") with the SA Department for Energy and Mining ("DEM") following receipt of opinion from South Australian land access expertise with regard to alternatives to progress access to the Woomera Prohibited Area ("WPA").

The EPEPR covers three proposed drillholes located northeast of Coober Pedy, South Australia. (**Figure 1**)

One drillsite, (SR11C) is located 25km northeast of Coober Pedy and the other two (OH Central and OH South) are located more than 50km northeast of Coober Pedy

Existing land access agreements with pastoral holdings and native title holders will be updated if required. Communications with stakeholders have been ongoing from previous tenements and the areas to be drilled have been heritage cleared by the local native title holders Antakarinja Matu Yakunytjatjara ("AMY") and Arabana.

Sites OH Central and OH South are subject to additional conditions relevant to the Woomera Prohibited Area, and require further access permitting. The Company is seeking to engage an independent operator with WPA access credentials to undertake that part of the program where special access permits are required.

This announcement has been reviewed and authorised for release by the GCR Board.
